

## Wireless Features!

As more and more businesses are going mobile, the demand for rapid solutions and the need for "unbroken" communications is increasing. Panasonic eliminates the last barrier to full mobility with the option of fully wireless communications. The Toughbook's integrated wireless communications design removes reliance on "wired" communications, with their time and location constraints allowing your company to enjoy true real time information and data transfer among headquarters, colleagues and customers. The [Toughbook 28](#), [Toughbook 34](#), [Toughbook 50](#) and [Toughbook T1](#) are designed to support all current nationwide networks including CDPD, DataTAC and Mobitex and allows true multi-party support and active involvement in mobile environments while providing extremely high levels of information security.

### Features

- Integrated Wireless\*, no cards to install
- Superior signal performance
- No electro-magnetic interference
- Flexible antenna
- Support for all major networks
- Integrated modem

### Applications

- Dispatch
- GPS tracking
